

Getting Started

ServerPanel adds a player information menu to your server, where you can both share important and useful information with your players and integrate your plugins into it!

Features

- **User-Friendly Interface:** Intuitive GUI for easy navigation and interaction.
- **Economy Integration:** Supports various economy plugins for seamless financial management.
- **Dynamic Menu Categories:** Organize functionalities into customizable categories for better user experience.
- **Extensive Configuration Options:** Almost every aspect of the plugin can be customized, including messages, colors, sizes, fonts, position.
- **Auto-Open Menu:** Automatically displays the menu upon player connection, configurable per server settings.
- **Block Settings:** Control access to the menu during building, raiding, or combat situations to enhance gameplay balance.
- **Multiple Economy Head Fields:** Display various economic metrics such as balance, server rewards, and bank information.
- **Permission Management:** Fine-tune permissions for different user roles to control access to features.
- **Localization Support:** Easily translate and customize all messages for different languages.
- **Performance Optimized:** Designed to minimize server lag while providing rich functionality.
- **Customizable Hooks:** Integrate with existing economy systems using customizable hooks for adding, removing, and displaying balances.

Commands

Command	Description
/info	Open menu
/sp.install /welcome.install	Open installer menu

Permissions

The plugin uses the following permissions:

Permission	Description
serverpanel.edit	Allows players to edit the plugin settings and open the edit menu
serverpanelinstaller.admin	Required to access the plugin installation functions

Installation

▼ Installing the ServerPanel Installer plugin

▼ Step 1: Install the plugin on the server

1. Download the plugin: Get the plugin file "ServerPanelInstaller" from the official website.
2. Place the file: Copy the plugin file to the oxide/plugins folder of your server (if you are using Oxide) or in the carbon/plugins folder (if you are using Carbon).

▼ Step 2: Checking the installation

Make sure the plugin is installed correctly by typing the command:

(if you are using Oxide)

```
oxide.plugins
```

(if you are using Carbon)

```
carbon.plugins
```

▼ Using the ServerPanel Installer plugin

Opening the installer

To start installing the "Server Panel" plugin, follow these steps:

1. Connect to your Rust server.
2. Use command: Type one of the following commands in game chat:

```
/sp.install
```

or

```
/welcome.install
```

Installation steps

After running the command, the installer GUI opens. You will be guided through several steps:

1. **Welcome:** The first screen displays a welcome message and a brief description of the installation process. Click the "START INSTALLATION" button to begin.
2. **Dependency Check:** The installer will check if all the necessary dependencies are installed for the plugin to work correctly. If something is missing, follow the instructions on the screen.
3. **Template selection:** You will be prompted to select one of the pre-installed templates for your server menu. Each template has its own unique design and functionality.
4. **Pre-Configuration:** Fill in the fields with your contact information so that it will display correctly on your server.
5. **Complete the installation:** Once all steps are completed, the installer will display a message indicating a successful installation. You will be able to customize the dashboard to your liking.

▼ Installation FAQ

1. What should I do if I don't see any commands to install?

Make sure you have the "serverpanelinstaller.admin" permission on the server. If you are not sure, contact the server administrator.

2. How do I cancel the installation?

You can click the "CANCEL AND CLOSE" button in any step of the installer to cancel the installation process.

3. What do I do if the installation fails?

Check if all necessary dependencies and updates are installed for your server. If the problem persists, contact support or our discord channel.

FAQ

1. Why can't I open the menu?

Make sure that the plugin is installed and activated on your server. If the problem persists, contact the server administrator.

2. How do I enable Expert Mode? (disables automatic template updates)

In the data file "Template.json", turn on the "Use an expert mod?" option:

```
"Use an expert mod?": true,
```

"Template.json" is located in the "oxide/data/ServerPanel" directory (if you use **Oxide**) or in the "carbon/data/ServerPanel" directory (if you use **Carbon**)
